Performance at the blowing test track confirmed

Tube inner diameter suitable for blowing

All-dielectric design

Tension: installation 1100N operation 400N

### Application and design

- Blowing into microducts
- Installation into indoor/outdoor cable conduits and trays

Cable consists of stranded core with central strength member (FRP) and two layers of gel-filled loose tubes with optical fibers and PBT fillers (natural color). Stranded core is fixed by water-swellable yarns. Outer jacket is made of PA12. Ripcord is laid under the cable jacket. Color of outer jacket is black.

## Color identification of loose tubes and optical fibers is according to ANSI/TIA-598-D-2014

Loose tubes 1<sup>st</sup> layer: 1-6

Loose tubes 2<sup>nd</sup> layer: 1-12

Optical fibers: 1-12

## Reel packing and marking

Cables are supplied on non-returnable wooden reels. Reel diameter is not less than 40 diameters of the cable. Not less than 2 m of inside end of the cable is fixed to the reel flange. The cable ends are sealed with waterproof covers.

The label on the outer reel flange contains our trademark, cable type, customer's name and PO, reel number, production date, cable length, cable weight net/gross.

The following information is printed on the reel flange: manufacturer's name and website, rotation direction, cable end indication, shipping and handling summary, labels "Fragile" and "Handle with care".

Our cable passport shows: cable type, technical standard number, cable length, fiber type, fiber coloring, fibers per tube, tube identification coloring, final attenuation for all fibers, refractive index of the fiber, fiber manufacturer and production date.

Cable passport is affixed to the inner flange in a plastic bag. Additional information can be included on the passport upon request.
